

Tools for Practice is proudly sponsored by the Alberta College of Family Physicians (ACFP). ACFP is a provincial, professional voluntary organization, representing more than 4,000 family physicians, family medicine residents and medical students in Alberta. Established over fifty years ago, the ACFP strives for excellence in family practice through advocacy, continuing medical education and primary care research. www.acfp.ca

The skinny on BMI and mortality

Clinical Question: What is the association between body mass index (BMI) and mortality?

Bottom-Line: Normal (20-25) to overweight (25-30) BMI carry the lowest risk of mortality, with ~25 appearing lowest (in elderly ~27.5). Mortality increases when BMI is below “low-normal” (BMI <20) and obese (BMI \geq 30), more at the extremes.

Evidence:

- \geq 8 systematic reviews of observational studies in general population evaluating all-cause mortality at various BMI ranges.¹⁻¹⁰ Focusing on the largest and most recent:
 - Most studies¹ (97 studies, 2.88 million participants) compared to normal (BMI 18.5-24.9), relative risks (RR):
 - Overweight (BMI 25-29.9): RR=0.94.
 - Obese Grade I (BMI 30-35): RR=0.95.
 - Obese Grade \geq II (BMI >35): RR=1.29.
 - Most participants² (eight studies, 5.8 million participants) comparing to high normal BMI (22.5-25), hazard ratios (HR) for men:
 - Low (BMI <18.5): HR=1.88.
 - Low normal (BMI 18.5-20): HR=1.39.
 - Mid normal (BMI 20-22.5): HR=1.15.
 - High normal (BMI 22.5-25): HR=1.00.
 - Low overweight (BMI 25-27.5): HR=0.97.
 - High overweight (BMI 27.5-30): HR=1.04.
 - Obesity Grade I (BMI 30-35): HR=1.18.
 - Third largest³ (19 studies, 1.46 million participants) compared to BMI 22.5-24.9 for women:
 - BMI <18.5-20: Increase mortality (HR=1.25).
 - BMI 20-27.4: Very similar risk throughout range (HR=1.03-1.05).
 - BMI >27.5: Mortality increases with BMI, examples:
 - BMI 27.5-30: HR=1.14.
 - BMI 40-50: HR=2.13.
 - Others found similar.⁴⁻⁸
 - Meta-analysis in specific populations:

- Diabetes:⁹ Similar to above.
- Elderly (age ≥65):^{1,10,11} Overweight lower risk (best ~27.5 BMI).¹⁰
- Pre-existing CVD,¹²⁻¹⁵ COPD,¹⁶ hemodialysis:¹⁷ Overweight and Grade I obesity similar risk¹² or reduced risk¹³⁻¹⁷ relative to normal weight BMI.

Context:

- Confidence intervals not presented above: Trends of risk are more informative. Highest risk occurs at extremes of BMI with lowest risk occurring around 25 (27.5 in elderly). Minimal differences in HR/RR around 1 (e.g. 0.9-1.1) are likely of little clinical importance.
- Observational studies cannot prove causation.
- BMI indicates weight for height: Weight (in kilograms) divided by height (in metres) squared. BMI does not indicate fitness level.¹⁸
- Guidelines recommend the use of BMI as an assessment for obesity and intervention in individuals who are overweight and obese.^{19,20}

Tools for Practice is a biweekly article summarizing medical evidence with a focus on topical issues and practice modifying information. It is coordinated by G. Michael Allan, MD, CCFP and the content is written by practicing family physicians who are joined occasionally by a health professional from another medical specialty or health discipline. Each article is peer-reviewed, ensuring it maintains a high standard of quality, accuracy, and academic integrity.

The ACFP has supported the publishing and distribution of the Tools for Practice library since 2009. If you are not a member of the ACFP and would like to receive the TFP emails, please sign up for the distribution list at <http://bit.ly/signupfortfp>. Archived articles are available at no extra cost on the [ACFP website](#).

You can now earn credits on Tools for Practice! In August 2014, the ACFP launched [GoMainpro, an online accreditation tool](#) to help facilitate MAINPRO® accreditation for the ACFP's Tools for Practice library which has been accredited for Mainpro-M1 credits by the College of Family Physicians of Canada (CFPC). The combination of the CFPC's Direct Entry Program and GoMainpro's tracking and reporting features provide an easy and convenient way to earn Mainpro-M1 credits.
